Examination approach and delivery
High-stakes exam development and delivery require the highest levels of security and accuracy. In partnership with Pearson VUE, we deliver our high-stakes pharmacy exams to thousands of candidates around the world. Through regular subject-matter reviews and psychometric analysis, we ensure the reliability, defensibility and validity of our exams.

Examination format
The CAOP Exam is a computerised exam delivered via Pearson VUE software.

It consists of 105 multiple-choice questions and one short answer response question.

Candidates must complete the exam paper within 3 hours.

Each multiple-choice question contains a stem, either a question phrase or short paragraph and four possible answers.

There is only one correct answer for each multiple-choice question.

The short answer question contains a short patient scenario and an associated question. Candidates are required to provide a written response to the question. An example of the short response may be a letter or email to a doctor detailing medication-related considerations.

The Pearson VUE software randomises the order of the questions. However, the questions related to the calculations content area will always appear in the first 8 questions of each exam, and the short answer question will always be the last question.

Examination subject areas
The CAOP Exam covers five content areas based on the National Competency Standards Framework for Pharmacists in Australia 2016. The areas covered in the exam are:

- Calculations
- Appropriate approaches to medication management and health promotion
- Implementation of medication management strategies and plans
- Monitoring and evaluation of medication management strategies and plans
- Use appropriate communication skills

Examination question types
Questions may either stand-alone or be associated with a patient profile.

Stand-alone questions are those questions that are self-contained. You will be given all the information required to answer the question.

Patient profile questions are 2 to 5 questions that are linked to content found in a patient record or profile. The patient profile will provide candidates with basic information about the patient (e.g. age, weight, allergies) and also more detailed information like a presenting complaint(s), any test results and the medication history.

Patient questions should be answered within the context of the profile. The answer to a question in the profile will not be dependent upon correctly answering another question. Candidates will be able to answer each question independently of other associated questions.
